How to Measure for Your New Kitchen/Bath

Your kitchen/ bath measurements will be necessary for us to help you design the kitchen/ bath you've always wanted. Just follow the steps below:

Step 1: Draw a rough sketch of your kitchen/ bath on the graph paper provided. Be sure to include all doors and windows.

Step 2: Start measuring from any corner on the wall above your counter. Measure to the first door, window or corner. Write that wall measurement (in inches).

Step 3: Measure the width of the first window or door and write that measurement on our sketch. Measure the outside of the frame from left to right from the edges of the moulding.

Step 4: Measure every wall, ceiling height, window, door or obstruction until you have all measurements.

Step 5: Measure from the center of your sink and range (or sink, tub, shower, toilet) to the nearest corner and write those measurements on your drawing.

Step 6: Bring photos and all these measurements to us to help get your kitchen and bath plans started.
